

APA102 Datasheet

General Description

APA102 is a type ic for the three-color RGB Diming control strip and string ,This ic using the CMOS process to provide three-color RGB LED output driver to adjust the output with 256 gray scale and 32 brightness adjustment ,APA with 2 signal output way , one is clock ,another is data, the clock and data is synchronized ,so that the crystal cascade piece of output movement is sychronized .

Feature

- CMOS process,low voltage ,low consumption
- Synchronization of two-lane
- Choose positive output or negative RGB three-color LED output
- 8 bit(256 level) color set ,5bit(32 level) brightness adjustment
- Build-20ma constant current output
- With self-detection signal build in support for continuous oscillation PWM output ,can be maintained static screen

Application

- LED lamp
- LED Strip ,led pixel module
- LED billboard LED screen

(2). The number of pixel per second sent to the CKI frequency (FCKI) minus the Start Frame bit divided by the number 40 the number of LED Frame bit 32, if the CKI frequency(FCKI) to 512KHZ. The pixel number $(512000-40)/32=15998$, if the 50 second update Views can be connected in series LED number $15998/50=319$. To increase the number of cascaded IC CKI frequency

(3).POLAR to empty ,R,G,B for the negative output;POLAR access VSS ,R,G,B is positive output

(4).VEN: self-detection

DATA field to the middle of 3 bit is B,G,R in the MSB of the opposite phase,otherwise regarded as invalid data. VEN close to the empty when the self-detection; when VEN VSS then activated self-detection

(5).CSEL to empty when the CKO and CKI,RP:CSEL connected with VSS when the

CKO compared with CKI.
