Note:

- 1. Load short circuit and overload will cause power protection and cause the power supply to not work normally.
- 2. The connection line between the power supply and the load should be as short as possible. Too long or too thin connection line will cause voltage drop on the line, and too thin connection line will easily cause hidden dangers in safety.
- 3. Please install the power supply in a well-ventilated place to ensure good ventilation and heat dissipation of the power supply.
- 4. Live wiring is prohibited. After checking and confirming that the wiring is correct, check that there is no short circuit, and then
